Dear Colleagues!

Ltd. "ROSECO-STROYPROEKT" successfully designed facilities of water supply, water treatment plant and effluent treatment plant for green field Pulp Mill located in Yeniseiskiy district of Krasnoyarskiy kray, Russia.

During the project it was designed below facilities:

- Surface bucket water intake from the river Yenisei for process and firefighting needs;
- Water treatment plant (mechanical, chemical and demineralization treatment) for process needs;
- Two water pumping stations (one of them is unique building);
- Effluent treatment plant for process and domestic sewage;
- Rainwater treatment plant;
- Scattering water outlet in Yenisei river.

Capacities of designed facilities:

- Capacity of water around is 100 000 m³/day
- Total area is more than 85 000 m²
- Total building area is more than 55 000 m²
- Gross construction area is more than 600 000 m³

Ltd. "ROSECO-STROYPROEKT" prepared bellow Proekt documentation:

- Architectural decisions
- Construction and space-planning decisions
- Electric power supply and lightning decisions
- Water supply and sewerage decisions
- HVAC
- Process decisions

"ROSECO-STROYPROEKT" team showed the high level of design and management skills during the project. These facts allowed us to find optimal design decisions and finish project in time with receiving the positive statement of main Government Expertise.

We recommend Ltd. "ROSECO-STROYPROEKT" as responsible and professional partner at the same scale projects.

Best regards,

Ivan Andreev,
Project Director
